

Two Shot Growing Formula

Why use Two Shot?

Two Shot is a new easy to use formula that uses the same amount of each Part A and

Part B to create a simple yet powerful feed program. It is based on the "Dutch Style" two-part that can be used to feed plants at all stages from seedling and clones right up to the final weeks of flowering. Based on research from our Dutch greenhouse friends in Holland and using Diablo's research team building on that knowledge, helps to create a robust and vigorous plant growth.

Two Shot A and Two Shot B can be used for soil or soilless, coir or water culture/hydroponics and for Outdoor and Indoor gardening. Two Shot contains all the nutritional elements needed for optimum growth and is adjusted slightly as each stage of plant growth is reached. Again by using equal amounts of each part, it's simple and uncomplicated for new or seasoned growers. Two Shot is both economical and easy to use.

Two Shot Part A 3-0-1

Two Shot Part B 0-4-3

No matter what your growing method is or your growing media, Two Shot is sure to make every grower successful with its top performing formula.

What do plants need?

The issue with growing exotic plants, unique species, cannabis, herbs and other plants is their diet is like a human's diet and is more complex and depends on the phase of growth the plants are going through.

For this reason Diablo has other ingredients like calcium, magnesium or sulphur included in the Two Shot formulation so the food is "always" available for the critical phase when the plants need it most. For optimum performance use with other Diablo products like Monster Thrive, Cal or Sea Monster.

*Avalible in 1L, 4L, 10L & 20L sizes.
