

Diablo N-27 "Green Fuel"

This product contains 27% nitrogen (N) of which 13% is in Nitrate form and comes in a "fast acting" liquid solution.

N-27 helps to provide supplemental nitrogen which is important in fast growing crops because the plants appetite and need for nitrogen is critical during this phase. Nitrogen is a necessary building block for the manufacturing of amino acids, chlorophyll, vitamins and protein production.

If a plant has a deficiency of nitrogen (N) the large leaves will show a fading green to yellowing color indicating a problem, poor growth and often flower too soon. Too much nitrogen and the plant will become lush and soft and tend to grow more slowly, so it's a balancing act.

Supplemental nitrogen prevents a shortage of (N) during the critical vegetative state and in late flowering especially in plants grown at an accelerated rate.

- **Diablo N-27** is compatible with most other fertilizers.
- Prevents nitrogen deficiency.
- Nitrogen is a major food source for plant photosynthesis.
- **Diablo N-27** can be applied as a root drench.
- Source of ammonium nitrogen which is useful for soil uptake and protein production.
- Adds Nitrogen to soilless mixes like Coco (coir) and peat mixes.
- Nitrogen is part of the chlorophyll molecule responsible for dark green plant color.
- **Diablo N-27** is economical and easy to use.

Application: Add **1-3 mL per litre** of water or nutrient solution until dark green color reappears on new growth

* Available in 1L, 4L and 10L sizes.
